

Project Description: Telegram Blogging Bot

Developed a Telegram blogging bot for managing a personal development channel using Node.js.

Key Features:

1. High security level
2. Dedicated admin panel
3. Ability to send three types of formatted blog posts
4. Intelligent blog fetching system: automatically finds English blogs from the internet, retrieves author images, translates content into Persian, and posts them to the channel
5. Optimized code structure with an image caching system for author profiles
